Mr. Madison O. Willmore
2559 South 15th East
Salt Lake City, Utah 84106

Dear Mr. Willmore:

Re: Heusted Dam Regulation
Lower Jordan River -
Surface Canal

A meeting was conducted by this office, September 13, 1967, relative to the regulation of the Heusted Dam. Mr. Paul Maucher, Lower Jordan River Commissioner, was directed to take over the regulation of this structure.

In the meeting it was emphasized that there is no measuring device or regulating works at the head of the west canal diverting water from the Heusted Dam embayment to the Harrison Duck Club. Because of this condition, Mr. Maucher, the Commissioner, has been unable to properly regulate the various water rights in association with the Heusted Dam.

Messrs. John Bene, Donald C. Norseth, and Bryce Montgomery from this office, in company with Mr. Maucher, made a field examination of the area, October 24, 1967. The following was arrived at:

1. For this fall season, Mr. Maucher will do his best to regulate the Heusted Dam as the facilities presently exist.
2. However, before July 1, 1968, you are directed to install a satisfactory diversion and measuring structure at the head of your west canal where it leaves the Heusted Dam embayment. The structure is to be of a type that will enable Mr. Maucher to efficiently regulate your water.

Yours very truly,

Hubert C. Lambert
STATE ENGINEER
DIVISION OF WATER RIGHTS
